About Folder Locker

Join Folder Locker Community.

Folder Locker is an Android app created by Ahmed K SanShania who was born on 16th of March.

This app was created to help users keep personal files more private and make it easier to find and manage files on their device. This document explains why the app was created, how to get started, and where to find the community and installation page. Read more

Why Folder Locker was created

- Privacy: To give users a more private place to manage files they do not want to open or show casually.
- Convenience: To bring file access and common file-management actions into one app instead of making users search through many folders.
- Control: To help users organise their files and manage them intentionally.
- Ease of use: To make file management more approachable with a clear mobile interface.
- Learning and improvement: To build and improve a practical Android project based on real user needs and feedback.

How to use Folder Locker

1. **Open the app:** Launch Folder Locker on your Android phone and follow the on-screen setup or login instructions.
2. **Set up your lock:** If the app asks you to create a password, enter it carefully and confirm it when prompted. Keep it private and choose a password you can remember.
3. **Use available authentication:** If fingerprint or device authentication is enabled on your device and supported by the app, follow the prompts. Keep your password as a fallback where required.
4. **Browse your files:** Open the relevant file category or folder, such as images, videos, music, or documents, when those categories are available in your version.
5. **Manage files carefully:** Use the available file actions—such as opening, sorting, renaming, sharing, copying, or moving—only after checking the selected file and destination.
6. **Lock your phone and app:** Use your device screen lock and any available Folder Locker session or auto -lock settings. Do not assume a file is protected unless the app confirms its protection status.
7. **Ask for help or updates:** Visit the community/install page for app information, installation access, and community discussions.

Important security tips

- Never share your password, PIN, or authentication details with anyone.
- Use a secure screen lock on your Android device.
- Keep a backup of important files in a safe location.
- Before moving or deleting a file, check the destination and confirm that you have selected the correct item.
- App features may differ by version; follow the controls and instructions shown in your installed version.

Folder Locker community and installation page

Visit the Folder Locker community/install page for app access, updates, and community participation:

https://folder-locker-my-first-app.vercel.app/

Note: availability of new downloads and updates depends on the publishing service. If the page does not show a new version yet, check again later.
